

CHAPTER 1

Sample First Chapter

1.1 Introduction

I wouldn't actually name any of my chapter files `chapter1.tex`, `chapter2.tex`, etc. End-of-sentence citation:(?) You might decide to swap them around at some point, and then things can get messy, especially if you've labeled things inside those files with labels like "chap1." Computers are good at counting things, let L^AT_EX do that for you. Be general with your naming scheme, you can always rearrange things by altering their order in the main `dissertation.tex` file.¹.

1.2 Math Example

This is a real short example of using the equation environment.

$$y = mx + b \tag{1.1}$$

There is an awful lot that the equation environment and math mode can do for you.

¹Look at me! I'm a footnote!
